PROFESSIONAL SUMMARY

Versatile Software Engineer with a focus on Backend Development and Data Analytics. Proficient in Python, Java, SQL, and Power BI. Experienced in building scalable APIs and developing data-driven dashboards to support business intelligence. Skilled at optimizing system performance and automating ETL workflows to deliver actionable insights.

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL, JavaScript
- **Backend & Frameworks:** Spring Boot, Django, FastAPI, REST API Design
- **Data & Visualization:** Power BI, Tableau, ETL Pipelines, Data Validation
- **Databases & Tools:** PostgreSQL, MySQL, Redis, Docker, Git, Postman

PROFESSIONAL EXPERIENCE

Associate Software Engineer Intern | ThynkTech India, Pune **Oct 2025 – Present**

- Developing data-driven backend services using Python to process structured datasets for business insights.
- Building and optimizing ETL data pipelines, integrating analytical results into backend systems for reporting.
- Designing interactive dashboards in Power BI to visualize key performance metrics and system health.

Platform Developer Intern | Standard Learner, Pune **Aug 2024 – Nov 2024**

- Engineered AI-driven chatbot systems and integrated third-party APIs to improve platform automation.
- Validated and cleaned large datasets to ensure data consistency across internal applications.
- Reduced backend processing time by **15%** through proactive workflow restructuring.

Python Developer Intern | CipherByte Technologies (Remote) **Feb 2024 – Apr 2024**

- Developed automation scripts for data extraction and transformation (ETL) using Python.
- Achieved **40% reduction** in manual data work via efficient ETL workflows and reusable scripts.

TECHNICAL PROJECTS

Retail Sales Forecasting & Analytics (Python & Scikit-learn)

- Analyzed historical sales data to identify trends and built forecasting models using time-series analysis.
- Performed extensive feature engineering and visualized results to support demand pattern identification.

Real-Time Collaborative Task Manager (Django & WebSockets)

- Developed a Trello-style application enabling multiple users to manage tasks in real-time.
- Implemented secure user authentication and relational schemas for task-dependency tracking.

Scalable URL Shortener with Analytics API (Redis & Docker)

- Built a high-concurrency service utilizing Redis for lightning-fast redirection and caching.
- Designed a RESTful API to track click analytics and containerized the application using Docker.

EDUCATION

ISBM College of Engineering, Pune **Expected May 2026**
Bachelor of Engineering in Computer Engineering **CGPA: 7.50**

Sanjivani K.B.P. Polytechnic, Kopargaon **July 2023**
Diploma in Computer Technology **Score: 85%**

CERTIFICATIONS

- Machine Learning, AI & Deep Learning – Infosys Springboard
- Data Science Full Course – Technogeeks
- Data Visualization – Dev Town
